

1 Hour

ELAPSED TIME INDICATOR

100 COUNT

The Timestrip® 1 hour indicator is a convenient reminder to replace a part, monitor an expiry date, maintain a device or carry out a task. Timestrip® 1 hour can be stored inert at room-temperature until it is needed and activated. It is self-adhesive and splash proof, and expires 2 years after the manufacturing date shown on the bag. It is designed to be used in a room temperature environment (average 22°C). It is not suitable for outside use.

1 Hour Time Instructions

Fully squeeze the activation button between thumb and finger so all the liquid is released. A blue line and 'on' will appear within 1-2 minutes to show that the Timestrip® has been activated.

Peel off the backing liner and stick the Timestrip® to the product, material or device to be monitored.

Once activated, the blue dye will indicate elapsed time by moving through each white window and completely filling it. The progress of the blue dye is irreversible and each Timestrip® can only be used once. Monitor 1/2 or 1 hour with each label.

In the unlikely event that Timestrip® shows blue before you activate it, there is no need to contact customer service. Simply discard and take a new one. 1 or 2 products per 100 count are always provided free of charge.
